

**Pre-phase:**  
Identify potential decarbonisation levers within Egiss own operation and give input to CO<sup>2</sup> reduction potential.

**Phase 1:**

Renewable electricity in Denmark and clean energy in the US.

Egiss Denmark has entered a partnership with The 0-Mission to cover some of our electricity consumption via a subscription to solar panels. Egiss America will match 100% of the electricity from its own operation via blocks of clean energy.

**Phase 2:**  
No later than 2026, all Egiss company cars will be electric.

At the end of the existing leasing agreement, all cars will be renewed with electric cars.

**On-going phase:**

Monitor and report on progress.

Adjustments of actions pending learnings to further accelerate decarbonisation through the entire supply chain.

Identify potential decarbonisation opportunities in India, China, and Indonesia. Monitor Scope 3 categories "Processing of sold products" and "Use of sold products".

Update our entities in the US, China and India with export licenses to coordinate shipments to neighbouring countries.

Identify ways of reducing waste from our warehouse activities.

**2030:**  
Reach a minimum 38% reduction of scope 1 and 2.

**2050:**

Net Zero emissions in accordance with the Paris Agreement.
